COMMUNITY UPDATE

Helping local farms grow for the future

With support from our enterprise development programme, **13 small farming businesses in the Boshof area, are building a more secure future** by strengthening their businesses through practical training, guidance and improvements to water systems and farming facilities.

The programme is also helping farmers manage their finances, keep records and find markets for their products. With 11 farmers already identifying family members to take over one day, the focus is not only on growing stronger farms today, but also on securing their future for the next generation.

Strengthening local food production & creating future opportunities for families

MORE FROM THE COMMUNITY

EDUCATION

Young children in Boshof and Hertzogville stand to benefit as **15 ECD practitioners pursue a two-year training programme.** They are diligently working towards recognised qualifications, while gaining practical skills.

The programme helps practitioners plan meaningful activities, understand children's needs and build their confidence, giving young learners a stronger start to school.

SKILLS

Four young people from Boshof and Dealesville are working towards becoming **qualified industrial electricians through a three-year learnership.**

Funded by the solar plant and delivered through the Artisan Training Institute, the programme combines technical learning with practical experience. Trainees complete three training phases and a trade test, building skills that can help them access future work opportunities in industry.
