COMMUNITY UPDATE

Youth take steps towards electrical careers

Five young people from De Aar, Britstown and Philipstown have started a three-year learnership to become industrial electricians. They will study through the Artisan Training Institute in Kimberley and gain practical experience at De Aar Solar Power.

The programme combines classroom learning with work on site, helping trainees build the skills needed for technical careers. Their training includes three phases and a final trade test. For participants such as Carlito Julius and Patience Bonolo Goeiman, this is an opportunity to build on previous studies and work experience, while preparing for future employment in the district's renewable energy and other industries.

MORE FROM THE COMMUNITY

ENVIRONMENT

Learners at Kareeville and Alpha primary schools have been **turning waste into jewellery and sweet baskets** to sell at Entrepreneurship Days.

Through the Eco-Schools Programme, delivered by WESSA, they are learning business skills while discovering creative ways to care for the environment.

EDUCATION

Delivered by Custoda with course content from Sol Plaatje University, **7 ECD practitioners have joined a two-year training programme**. The programme combines classroom learning and practical experience, helping the practitioners gain recognised qualifications and improve the care and learning they provide to children at local centres.
