COMMUNITY UPDATE

Young learners take action for cleaner schools

More than 1000 learners at Waterworks and Beacon primary schools are learning how to care for their surroundings thanks to a new programme that is bringing environmental learning into everyday school life.

Activities include food gardens, recycling, composting and finding new uses for waste. Teachers are also receiving support to guide learners.

The next step is to establish school eco-clubs and help learners lead their own projects. The aim is to build cleaner, healthier schools and encourage children to share these habits with their families and wider communities.

MORE FROM THE COMMUNITY

SKILLS

Local youth, Refilwe Dikhutso, Donald Dithebe and Karabo Moitsi have started **training to become industrial electricians.**

Their three-year programme combines studies at the Artisan Training Institute with practical experience at Droogfontein Solar Power. The trainees are learning how to maintain equipment, find electrical faults and understand plant operations before completing their trade tests.

EDUCATION

For 25 ECD practitioners, a new learning journey has begun, bringing opportunities to grow their skills and make a difference in the lives of young children.

Over the next two years, they will combine classroom learning with hands-on experience as they work towards recognised qualifications.
