From Humansdorp to a wind energy career in Germany

A career that began with technical training close to home has taken Humansdorp local, Kanyisa Goveni all the way to Germany, where she now works as a wind turbine service technician. Building on her existing qualification, she gained specialised skills through our Wind Turbine Service Technician training programme.

Kanyisa's story is not the only one. Fellow graduate Simanyene Blouw has also taken an exciting step into renewable energy, working as a trainee battery energy storage technician in the Northern Cape.

Both of these journeys show how the right training and practical experience can open doors to new career opportunities.

MORE FROM THE COMMUNITY

LITERACY

A new chapter in learning has begun at **Graslaagte Primary School, where a refreshed library is giving children more opportunities to explore books and grow their love of reading**. With new books, shelving, digital learning tools and improved security, the space is ready to well-equipped for young readers.

And its reach extends beyond one school. Around 1,500 learners across five participating schools are benefitting from the shared resources.

EDUCATION

For ECD practitioner Linda Mandyoli, further training is making a real difference in how she supports young children's learning. She is one of **15 practitioners working towards a recognised NQF Level 4 qualification** through a programme that combines classroom learning with practical experience.

Linda says the training has given her greater confidence and helped her plan activities that respond to each child's individual needs.
